ADVANCED MICROCURRENT SYSTEM

The Vitaderm® 4000

The Vitaderm® 4000 is the result of intense scientific research and extensive consultations with aesthetics professionals and physiotherapists who are experts in their field. The Vitaderm®'s microcurrent circuitry, controlled by advanced and unique technology, ensures impressive results from any facial electrolifting or silhouette remodelling treatment.

Incorporated in an innovative design, the Vitaderm® 4000's 9 facial programs and 17 body programs guide the operator in setting up the appropriate parameters, ensuring a safe application of each specialized function and maximum performance.

The VitaLift™ Facial Lifting Mode

The VitaLift™ mode offers you 4 treatment options designed to give the face a smooth and youthful aspect.

Facial Drainage

- Improves blood and lymph circulation
- Promotes toxin elimination
- Clears up complexion and minimizes dark circles under the eyes

Automatic Stimulation (self-adhesive electrodes)

- Firms the skin
- Tones the muscles
- Yields a lifting effect and visibly reduces wrinkles
- Remodels the facial oval

Specific Stimulation (hand-held electrodes)

- Stimulates a specific set of muscles in each area of the face (eyes, cheeks, chin, etc.) to meet the needs of each client

Personalized Stimulation

- Designed to create and program advanced stimulation treatments in automatic or specific mode

TONING & LIFTING TREATMENTS

The VitaGym™ Body Remodelling Mode

The **VitaGym™** mode offers you 4 treatment options designed to improve the overall body figure.

Presso-Drainage

- Improves circulation
- Promotes toxin elimination
- Prevents oedema (heavy legs)

Cellulite/Slimming

- Promotes oxygenation of skin tissue
- Minimizes the "orange peel" texture of cellulite
- Reduces excess adipose tissue and remodels the body figure

Firming/Workout

- Firms the skin
- Tones the muscles
- Enhances collagen and elastin production

Stress Relief/Relaxation

- Relieves heaviness and muscle discomfort
- Promotes relaxation

The VitaPhase™ Option

Vitaderm® facial and body microcurrent treatments may also be combined with the VitaPhase™ dermaphasic devices.

This unique option allows you to offer active ionomassage, stimulomassage or light therapy treatments, to yield even better results! Brilliant, isn't it!

The Vitalize™ Mode

The **Vitalize™** mode will allow you to offer specific iontophoresis treatments (ionization/deep-cleansing) for the face and body. While deep-cleansing emulsifies excess sebum on the skin surface for in-depth cutaneous cleansing, ionization enhances the absorption of cosmetic products and yields a calming and decongestive effect. A great addition to all your beauty sessions!

The VitaSense™ Mode

Using a galvanic current, the **VitaSense™** mode allows aestheticians to precisely determine the moisture level of their client's skin, enabling them to recommend the appropriate treatments and skincare products.
