

### Oxygen, a Precious Ally

- It stimulates cellular metabolism and blood circulation
- It nourishes the interstitial liquid (lymph), connective tissue and the basal layer
- It activates cellular regeneration
- It slows down the skin's ageing process
- It strengthens and tones the skin
- It eliminates impurities and reduces active acne
- It strengthens the skin's antibacterial defences to counter the formation of free radicals

# Let Your Beauty Breathe

### Lack of Oxygen

Air quality is increasingly precarious, and all this pollution definitely affects the skin.

The Vital-O<sub>2</sub>™ was born of our reflections on the irreparable damage caused by pollution, which gradually reduces the amount of oxygen available to us.

Oxygen is an essential element for our body's energy potential and metabolic functions. Lack of energy and a slower cellular metabolism are two characteristics of the ageing process.

### Visible Signs of a Lack of Oxygen

- Reduced cellular activity
- Premature ageing of skin cells
- Blood flow problems
- Loss of skin tone and pale complexion

By supplying oxygen to the skin, we produce the energy needed by the cellular metabolic process, which has a positive impact on the health and beauty of the entire body.

## Intra-Epidermic Injection Mode

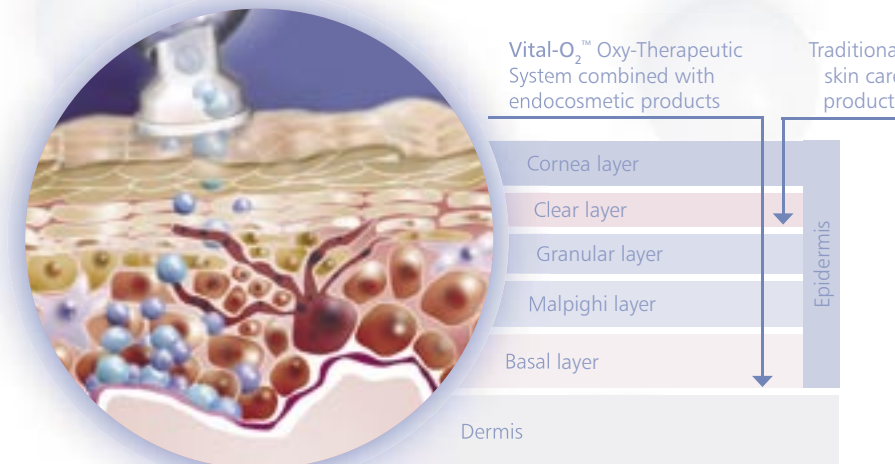

We know that the interstitial liquid (lymph), which feeds the epidermal tissues, travels in the intercellular spaces between the epidermal cells. 80% of this liquid flows within the basal layer in youthful skin—this layer is highly active in the cellular regeneration process.

As it ages, the skin loses its intercellular moisture, cellular renewal slows down, the dermis becomes thinner, fibroblasts are reduced along with collagen, the contact between the dermis and the epidermis is reduced and fine lines and wrinkles begin to appear.

Even after the skin has been prepared to receive active ingredients through mechanical exfoliation, the skin's permeability remains limited. By delivering a flow of pure oxygen at a predetermined pressure, the Intra-Epidermal Injection mode makes it possible to carry the active ingredients of endocosmetic serums (specifically formulated to have the same molecular structure as the interstitial liquid) into the intercellular spaces of the epidermis and build up a deposit in the basal layer. The uniqueness of this method lies in the fact that it does not require the use of needles!

### Advantages

- Reduction of fine lines and deep wrinkles
- Reduction of cellulite and stretch marks with the MultiJet™ applicator nozzle (optional)
- Reconstruction of skin damaged by aggressive treatments
- Reduction of hyperpigmentation
- Reduction of acne
- Overall revitalization and hydration of the skin
- Activation of cellular renewal

\*Effect confirmed by clinical studies done with the "PermaSkin" ATR infrared spectroscopy test by a world-renowned independent research centre employing high-level scientists.

# Let Your Beauty Breathe

## Abrasion Mode

By combining the Vital-O<sub>2</sub>™ Oxy-Therapeutic System with the VitaPeel™ Advanced Microexfoliation System\*, the Abrasion Mode allows you to perform oxygenated microdermabrasion treatments.

The novelty of this approach lies in the integration of a special microdermabrasion technique (carried out using a dual-function system of vacuum and exfoliation) and recent trends in the field of aesthetics based on the use of pure oxygen to feed and care for the skin.

### Advantages

- A less irritating microdermabrasion treatment
- A speedier healing process
- The use of totally pure crystals (thanks to the antibacterial effect of oxygen)
- Reduced redness after treatment

\*Sold separately

## Nebulization Mode

Thanks to a special glass diffuser, the Nebulization Mode allows you to release a cloud of pure oxygen. This ultra-refreshing vaporization can be combined with an antioxidant complex containing vitamins A, C and E or with a soothing lotion, depending on the desired effect.

### Advantages

- Astringent, restabilizing and invigorating effect
- High-level protection against free radicals (Vitamin complex)
- Reduces acne and eczema
- Calming, healing and antiseptic effect

## Inhalation Mode

Important research has shown that age, poor eating habits and stress influence and reduce the ability to carry oxygen throughout the body. This is due to a degradation of capillaries and blood circulation.

However, it is particularly important for our body's energy potential that the transportation of oxygen be efficient. Any stimulation process that improves tissue vascularization, such as oxygen inhalation, produces energy and stimulates metabolism.

### Advantages

- Possible to inhale 95% pure oxygen
- Stimulates metabolic functions
- Improves tissue vascularization
- Aromatherapeutic experience when combined with pure essential oils

## Facial Oxygenation Mode

The Facial Oxygenation Mode uses a specially designed mask to offer facial oxygenation treatments.

### Advantages

- Oxygenates the skin on the surface and in depth (simultaneous facial oxygenation and inhalation)
- Stimulates the metabolism functions
- Improves blood circulation and skin radiance
